BRIDGESTONE BATTLAX TECHNOLOGY

MS•BELT

MSB construction means that a continuous single strand is wrapped around the circumference of the tire. This one-piece construction eliminates overlapping of belts, seams, and joints. A MSB tire is lighter than conventional multi-cross belt construction, it has more stability since it minimizes heat generation inside the tire and gives high shock absorption.

V-MS•BELT

Optimization of the spacing of the MS•BELT cords coiled around the tire's circumference contributes to ideal tire contact properties, as well as enhanced grip and performance.

ULTIMAT EYE

Visualization of the tire contact patch behavior with measurement and simulation technology. Supplies less slip area for good traction while riding and improves wear life.

CAP&BASE

The underlying layer controls tread stiffness, reinforcement and assists with bump absorption.

3D CTDM

3D CTDM is Bridgestone's newest automated tire design technology. This leading edge 3D CTDM program enables Bridgestone to conduct dynamic, three-dimensional simulations and analysis of tire performance, in addition to finding optimum solutions at all lean angles.

HTSPC

Bridgestone was the very first motorcycle tire manufacturer to utilize 1X5 filament rubber insulated steel (MSB) in the manufacture of its motorcycle radial tires. This technology offers many advantages over steel that is used by the competition. This makes the tire more flexible, provides more stability without a reduction in shock absorption, and minimizes the generation of heat throughout the tire.

RC POLYMER

RC Polymer technology optimizes the distribution of silica within the rubber compound and improves tread flexibility allowing greater contact with the road surface in both hot and cold conditions. The reduction in molecular friction also improves rolling resistance, therefore increasing fuel economy.

OUTSIDE BEAD FILLER

The latest generation outside bead filler realizes the ideal sidewall profile analyzed by a finite element method by giving optimum force distribution and rigidity balance.

NANOPRO-TECH

NanoPro-Tech is the name of a technology that facilitates the realization of the required features in a tire by controlling the material microstructure through structural design at the molecular level. It is one of Bridgestone's fundamental technologies.

SILICA RICH

Silica Rich Compound provides enhanced gripping capability in wet conditions and low temperatures; ensuring superb handling at the beginning of every ride. It also provides a more consistent and longer lasting grip.

SILICA RICH EX

Performance in wet conditions is improved by increasing the amount of silica compared to conventional SILICA RICH.

3LC (DUAL COMPOUND)

Provides grip performance demanded in all riding modes. The center compound offers linear handling. The shoulder compound secures high grip and solid contact feel.

3LC+CAP&BASE

The CAP&BASE construction divides the shoulder of the compound of the tire into upper and lower sections. By using a high grip compound for the upper section of the shoulder, and a high stability abrasion resistant compound for the lower and central sections, provides the desired combination of both performance and mileage.

5LC (TRIPLE COMPOUND)

Offers ideal grip performance demanded in all riding modes. The center compound provides good stability. The shoulder compound transfers engine power to the road with strong traction. The edge compound offers strong side grip and solid contact feel at deep lean angles.

BATTLAX RACING STREET RS11

Enhance the ride of your liter bike with Bridgestone's flagship sport tire. The Battlax Racing Street RS11 is built with technology derived from the highest levels of racing. Whether you are chasing lap times, or riding your favorite winding road, enjoy Bridgestone's most aggressive street sport tire.

- Increased cornering grip and stability, with improved rider feedback:
  - The RS11 is the first road-oriented tire that has adopted the new V-MS-Belt construction in the rear which is currently used in Bridgestone's highest performing race tires. This significantly improves the contact area with the road surface, enhancing cornering grip.*
  - A new molecular approach of fine carbon particles in terms of compounding has improved the bite to the road surface and enhanced the grip characteristics of the compound itself.*
  - New 3LC compounds on the front and rear create greater grip, increased cornering stability, and improved rider feedback. No sacrifice to straight line stability.*
- Groove pattern inspired by the BATTLAX Racing R11: Design adaptations make it an incredibly capable track tire, while still maintaining street tire performance.
- Increased wet performance: Enhanced water dispersion due to new groove design *
- 1.9 seconds faster per 2 minute lap*
- Sizing for modern liter bikes
- DOT Approved (No warmers needed

Ride-On® Tyre Protection System

TPS TIRE BALANCER AND SEALANT

IMPORTANT NOTICE After installing Ride-On TPS Motorcycle Formula sealant into your tires you may notice a slight vibration until the sealant has warmed up and distributed evenly in your tires. This process usually takes 2 to 5 miles. Please DO NOT attempt to rebalance tires after the installation of Ride-On TPS Motorcycle Formula. Ride-On TPS is a balancing compound. Ride-On TPS will act as a balancer and will result in erroneous readings from a dynamic spin balancer that does not compensate for tire deflection, weight of the bike, brakes, or other suspension components. Ride-On is TPMS friendly, however it is not recommended for use in 2009, 2010, and 2012 Honda Gold Wings as their TPMS Sensors are not hermetically sealed.

BALANCE With one installation of Ride-On, lead weights become a thing of the past. While Ride-On works in conjunction with traditional weights, you won't need them anymore. Ride-On is specially formulated to hydrodynamically balance high-speed tires and dampen road noise and vibrations that cause a rough ride. The great thing is Ride-On will continue to adjust and literally rebalance your tires as you ride for the legal life of the tires. So go ahead, pop off those wheel weights, shine your wheels, and enjoy the smoothest ride you have ever experienced on your bike.

SAFETY FIRST With Ride-On TPS tire sealant, your tire literally fixes itself! If your tire is punctured, the centrifugal force of the rotating tire and the internal air pressure force Ride-On into the hole, sealing it virtually instantly. Since it helps eliminate porosity leaks that cause tires to deflate over time, your tires stay properly inflated, last longer, your bike handles better and gets more miles per gallon.

WORKS IN TUBE AND TUBELESS TIRES Ride-On TPS eliminates 85-95% of flats in tubeless tires from objects up to 1/4" (1/8" for tube tires) that penetrate the contact patch of the tire. Since puncturing objects often tear tubes, Ride-On's efficiency in tube tires is reduced to 55-65%. If the puncturing object remains in the tire, it is vital to remove it as soon as possible to prevent further injury to the tire or tube. Our company takes the position that any repair in a motorcycle tire should be treated as temporary.

AIR FORCE® BLASTER®

AIR FORCE® BLASTER®

Metro's classic Air Force® Blaster® has taken the motorcycle industry by storm, quickly earning a reputation among professionals and bikers alike as the most powerful and efficient dryer available. With a body of steel and powerful 4.0 Peak Horsepower motor, the Blaster® produces 29,250 ft./min. of clean, dry, warm, filtered air and blasts water off off bikes in seconds cutting drying time by 80%! The Blaster® leaves no spots or oily residue and completely eliminates "after-streaking" ™, those annoying streaks that appear out of nowhere when you start riding because of hidden water. With the Blaster®, water has no place to hide™! The Blaster® is also safer (great for older bikes and expensive customs) and more efficient than compressed air or leaf blowers.

HAYNES MANUALS

What sets Haynes Manuals apart is the attention to detail that goes into the production of each book. Every manual is written from hands-on experience based on a complete teardown, which is the step-by-step procedure of dismantling a particular vehicle part-by-part. This is followed by the detailed rebuilding of the specific model it documents. Writing each manual takes 30 man-weeks, with authors working as teams to shorten the production time and avoid fatigue during the difficult process. Hundreds of photographs accompany each manual's step-by-step instructions. The books are written from the actual experience of Haynes' own expert personnel using only a basic set of tools and presented in a style that any DIYer can follow, even a beginner. The DIYer can save a great deal of time and money, not to mention feeling proud of the job, by using a Haynes book..

RATCHETING TIE DOWN WITH WEB CLAMP

Erickson's NEW WEB CLAMP was designed to address the problem of what to do with excess webbing. The WEB CLAMP mechanism is much like a mouse trap, lift the spring loaded clamp and place the folded webbing under the clamp, release the spring loaded WEB CLAMP and you have trapped the excess web. Very simple and effective. SO NEAT!!

- The new cup is even easier and quicker to install correctly.
- The cups are sized to fit the fattest grips in the industry
- The steel D-ring "lay-ins" prevent losses even after many years of weather and abuse begin to weaken the Polycarbonate cup.
- We are using heavier thread with more stitches in the pattern for greater strength and the contrasting thread color aids in detecting flaws or damage.

CLASSIC SERIES WINDSCREEN

STAND OUT FROM THE CROWD

It's all about passion. Your bike is a living, breathing extension of your individual personality. You're extremely passionate about your bike. From it's low-slung, air-slicing front end to it's knife-like tail-section. The way your stomach gets slammed into your back pockets when you whack the throttle, and that rush you feel as the front wheel jumps off the pavement with each shift.

We don't want your bike to get lost in the crowd any more than you do. Today's sport bikes are simply amazing in terms of shear performance, handling and cutting-edge styling. We build this passion into every windscreen we design and our focus is to reflect that level of styling and performance. These are the most technologically advanced windscreens available, utilizing premium acrylic materials treated with our proprietary metallizing process which produces a brilliant yet durable chrome finish. These dazzling, tough-as-nails windscreens will definitely make a statement.

THROTTLE ROCKER®

AN EASY RIDE IN THE PALM OF YOUR HAND

Throttle Rocker causes the throttle grip to rotate, so you don't have to squeeze the grip to operate the throttle. With a Throttle Rocker motorcycle cruise assist, you'll be able to enjoy hours of riding without experience wrist fatigue. Why buy an expensive motorcycle cruise control when a Throttle Rocker is way less expensive, takes seconds to install, and has been proven by thousands of customers worldwide.

FOOTNOTES (FN)

079	For use with stock throttle bodies/carburetors and Revolver throttle assembly only. IMPORTANT - The Revolver VR throttle does not have the starter and kill switch wiring or switches that are built into your stock throttle assembly. Use of the Revolver VR Throttle requires an aftermarket kill switch and starter button assembly (pn 11-0098) not included in kit. Revolver Kits have cables specifically designed for fitment on specific models, but the Revolver throttle itself is not model specific. Therefore, in some situations, the Revolver kit may not be a direct bolt on installation due to space limitations on the stock handlebar. In some installations, it may be necessary to move other control components on the stock handlebar, shorten the Revolver throttle tube and grip, install longer aftermarket handlebars, or possibly all of the above. It is up to the end user to determine the best method for fitment on their motorcycle, and ensure that the Revolver kit is installed properly and with the correct clearances for safe operation. Installation should be done by a qualified mechanic and carefully checked for proper function. Warning: Improper installation could result in great bodily injury or death.
088	Revolver cables can only be used with stock throttle body (or carburetor where applicable) and Revolver throttle.
104	3 inches longer than standard length Revolver throttle cable part number 01-1106. Revolver cables can only be used with stock throttle body (or carburetor where applicable) and Revolver throttle
133	3 inches longer than standard length Revolver throttle cable part number 01-1205. Revolver cables can only be used with stock throttle body (or carburetor where applicable) and Revolver throttle

We recommend careful inspection of the pivot bolt when replacing a lever and that you replace the pivot bolt and lock nut if there are any signs of wear or if the prior lever suffered any impact damage. We also recommend that you replace the lock nut, if applicable, anytime the lever is removed. Pivot bolt and lock nut must be installed and tightened properly as recommended by the manufacturer of your motorcycle. Please remember to lubricate the pivot bolt per the factory service manual recommendations.

FOOT NOTES (FN)

For use with stock throttle bodies/carburetors and Revolver throttle assembly only. IMPORTANT - The Revolver VR throttle does not have the starter and kill switch wiring or switches that are built into your stock throttle assembly. Use of the Revolver VR Throttle requires an aftermarket kill switch and starter button assembly (pn 11-0098) not included in kit. Revolver Kits have cables specifically designed for fitment on specific models, but the Revolver throttle itself is not model specific. Therefore, in some situations, the Revolver kit may not be a direct bolt on installation due to space limitations on the stock handlebar. In some installations, it may be necessary to move other control components on the stock handlebar, shorten the Revolver throttle tube and grip, install longer aftermarket handlebars, or possibly all of the above. It is up to the end user to determine the best method for fitment on their motorcycle, and ensure that the Revolver kit is installed properly and with the correct clearances for safe operation. Installation should be done by a qualified mechanic and carefully checked for proper function. Warning: Improper installation could result in great bodily injury or death.

For use with stock throttle bodies. Stock reel is 33.4 mm. IMPORTANT - The stock twist throttle assembly on this model incorporates an on/off switch, mode switch, and starter button. The Motion Pro 11-0098 accessory switch only has an on/off switch and starter button, and cannot be used to replace the original switching functions on the stock throttle assembly. In order to install the Revolver VR kit and retain all the necessary switching functions, owners of this model will need to install longer aftermarket handlebars (at least 50 mm longer than stock on the right side) and use the stock throttle assembly mounted behind the Revolver VR throttle housing. The stock twist throttle assembly can be modified to remove the throttle reel holder portion and leave just the necessary switches. This modification makes it narrower and uses less space on the handlebar. Revolver Kits have cables specifically designed for fitment on specific models, but the Revolver throttle itself is not model specific. Therefore, in some situations, the Revolver kit may not be a direct bolt on installation due to space limitations on the stock handlebar. In some installations, it may be necessary to move other control components on the stock handlebar, shorten the Revolver throttle tube and grip, install longer aftermarket handlebars, or possibly all of the above. Installation should be done by a qualified mechanic and carefully checked for proper function. Warning: Improper installation could result in great bodily injury or death.

REV2 THROTTLE KITS

How the Rev2™ Throttle Works

The Rev2™ throttle has several different size reels that will change how much twist is necessary for the throttle to completely open the carbs or throttle bodies on a motorcycle. The larger the reel is, the shorter the twist. Each reel size will shorten the twist by about 10 degrees. If your stock throttle has a 40mm reel and stock twist is 90 degrees (1/4 turn), the 45mm reel will reduce the twist to 80 degrees and the 50mm reel will reduce it to 70 degrees. The 35mm reel will increase the throttle twist to approximately 100 degrees. This is just an example; every model of motorcycle is different.
The included cam reel has a progressive profile that allows the throttle to act like a sensitive, long twist throttle during the initial small throttle openings for precise control and then acts like a more aggressive short twist throttle at large throttle openings, progressively shortening the amount of twist needed to reach full throttle.

The most advanced variable rate throttle in the world

- The second generation of our innovative reel changing system lets you tailor the throttle rate to riding conditions and rider preference
- New ultra compact housing with snap-together elbows make it easy to install and change reels
- Sleek new design requires less handlebar space for lever clearance and throttle position
- Use smaller reels for slower throttle rate and larger reels for faster throttle rate
- Included cam reel provides progressive throttle response preferred by some riders
- Unique reel design allows fast reel changes
- Cable boot keeps dirt and dust out for reliable and smooth operation
- Billet aluminum in-line cable adjusters for easy installation and adjustment
- Lower section of cables use 5 mm housing with PTFE liner for reduced friction, increased routing flexibility and lighter weight
- Upper section of cables use 6 mm housing to provide solid support of adjusters
- Simple to install and maintain
- Designed by Motion Pro
- Patent pending

FOOTNOTES

140	For use with stock throttle bodies/carburetors and Rev2 throttle assembly only. **IMPORTANT** - The Rev2 throttle does not have the starter and kill switch wiring such as the wiring that may be built into your stock throttle assembly. Use of the Rev2 Throttle may require an after market kill switch and starter button assembly not included in kit. Please refer to Handlebar Stop/Start Switch applications for the specific Handlebar Stop/Start Switch needed for your year, make, and model motorcycle. Rev2 Kits have cables specifically designed for fitment on specific models, but the Rev2 throttle itself is not model specific. Therefore, in some situations, the Rev2 kit may not be a direct bolt on installation due to space limitations on the stock handlebar. In some installations, it may be necessary to move other control components on the stock handlebar, shorten the Rev2 throttle tube and grip, install longer after market handlebars, or possibly all of the above. It is up to the end user to determine the best method for fitment on their motorcycle, and ensure that the Rev2 kit is installed properly and with the correct clearances for safe operation. Installation should be done by a qualified mechanic and carefully checked for proper function. **Warning**: Improper installation could result in great bodily injury or death.
141	For use with stock throttle bodies. Stock reel is 33.4 mm. **IMPORTANT** - The stock twist throttle assembly on this model incorporates an on/off switch, mode switch, and starter button. The Motion Pro 144195 accessory switch only has an on/off switch and starter button, and cannot be used to replace the original switching functions on the stock throttle assembly. In order to install the Rev2 kit and retain all the necessary switching functions, owners of this model will need to install longer aftermarket handlebars (at least 50 mm longer than stock on the right side) and use the stock throttle assembly mounted behind the Rev2 throttle housing. The stock twist throttle assembly can be modified to remove the throttle reel holder portion and leave just the necessary switches. This modification makes it narrower and uses less space on the handlebar. Rev2 Kits have cables specifically designed for fitment on specific models, but the Rev2 throttle itself is not model specific. Therefore, in some situations, the Rev2 kit may not be a direct bolt on installation due to space limitations on the stock handlebar. In some installations, it may be necessary to move other control components on the stock handlebar, shorten the Rev2 throttle tube and grip, install longer aftermarket handlebars, or possibly all of the above. It is up to the end user to determine the best method for fitment on their motorcycle, and ensure that the Rev2 kit is installed properly and with the correct clearances for safe operation. Installation should be done by a qualified mechanic and carefully checked for proper function. **Warning**: Improper installation could result in great bodily injury or death.

YUASA BATTERIES

Not all snowmobiles have an electric start, but if you are lucky enough to own a model that does, you know one thing: you want it to start when you push that button. And so does the manufacturer. That is why they choose Yuasa. Some of Yuasa's most heavy-duty batteries live under the hoods of some of the biggest and fastest snow machines in the country. Just ask Arctic Cat, Bombardier (Ski-Doo), Kawasaki, Polaris and Yamaha. Manufacturers demand the best and they overwhelmingly choose Yuasa. So should you.

YUASA BATTERIES

Not all snowmobiles have an electric start, but if you are lucky enough to own a model that does, you know one thing: you want it to start when you push that button. And so does the manufacturer. That is why they choose Yuasa. Some of Yuasa's most heavy-duty batteries live under the hoods of some of the biggest and fastest snow machines in the country. Just ask Arctic Cat, Bombardier (Ski-Doo), Kawasaki, Polaris and Yamaha. Manufacturers demand the best and they overwhelmingly choose Yuasa. So should you.

MAINTENANCE FREE

Absorbed Glass Mat (AGM) Technology is an advanced battery design used in Yuasa's Maintenance Free Batteries that eliminates water loss. Once it's filled with acid the battery is permanently sealed - so you'll never need to fill it with water or check the acid level.

Long Life
Because of its lead calcium design, the AGM battery will hold its specific gravity more than three times longer than conventional lead antimony types. This means much longer periods between charges when the battery is used in a standby mode, like winter storage.
And to remain factory-fresh the AGM battery is shipped dry along with its own pack of high-gravity acid that's added at the time of installation.

Sealed, Non-spillable
Once filled with acid from its special packs, the AGM battery is virtually maintenance free. It's totally sealed and all of the acid is absorbed in the special plates and separators, so there is no need to worry about acid leaks on valuable vehicle parts and accessories.

YUMICRON CX

The YuMicron CX was the first small engine starting battery to use "lead calcium" technology. This special technology means the YuMicron CX generates more power, requires less maintenance, and lasts longer than any other conventional battery.

More Power
Because of its unique design, the CX will generate 5% to 8% more cold cranking amperage than our own high-output YuMicron lead-antimony battery. For high compression machines, this means greater reserve capacity and more starting power.

Less Maintenance
The YuMicron CX lead calcium technology also reduces water loss, so the CX requires servicing (water filling) only about one-eighth as often as ordinary lead-antimony types.

Longer Life
The YuMicron CX holds its specific gravity more than three times as long as lead-antimony type batteries resulting in a longer shelf life. This feature means longer periods between charges, especially during winter months.

~ IMPORTANT ~
Yuasa Yumicron/Yumicron CX Batteries are shipped dry with no acid. To order acid for your battery first check the acid volume needed on the Battery Specification Chart then order part #899099 for every 21 oz. needed.

TYTANEUM BATTERIES

Tough. Reliable. Whether you ride daily, seasonally, or just on weekends, you'll get more enjoyment out of your motorcycle, ATV, PWC or snowmobile with a TYTANEUM battery. Our batteries perform reliably during off-road, over water and cold weather use, and keep their charge even after months of storage. Available in traditional flooded or the new sealed AGH designs, TYTANEUM batteries are built to withstand punishing vibration, salt spray, gas and oil, and protect against equipment-damaging spills, corrosion and seepage. And because nothing ruins a weekend faster than a dead battery, we use advanced designs and manufacturing techniques to shorten current paths and reduce resistance, giving you higher cranking power and maximum battery life.

MAINTENANCE FREE HIGH PERFORMANCE

SEALED MAINTENANCE FREE

Once these batteries are put into service, they become a completely sealed unit requiring a lot less maintenance than Conventional Batteries. Although the battery still needs to be charged on a regular basis if your vehicle is not in use, there is no need to monitor the fluid level in this battery type. Unlike the Conventional Battery, once this type battery is sealed, it becomes spill proof, which can eliminate damage from battery acid that can occur from using a flooded battery.

FACTORY ACTIVATED MAINTENANCE FREE

The same convenience and technology as the Sealed Maintenance Free Batteries mentioned above, except this battery is sealed and activated at the time of manufacture. Very convenient to the point that all that needs to be done is put the battery into your vehicle and you are ready to ride. The only downside of this type of battery is that all batteries once activated have a shelf life, and if this battery is not going to be used right away, or be put in a vehicle that is not going to ridden on a regular basis, the battery will need to be kept charged on a battery maintainer.

TYTANEUM BATTERIES

CONVENTIONAL

This type of batteries has flooded electrolyte and is very accessible. These batteries have to be carefully and periodically maintained. The conventional batteries are normally less expensive than the other types mentioned, but with the cost savings come more maintenance. You will need to add distilled water from time to time to prevent the battery from sulfating. Water loss is a normal characteristic of this type of battery because of the high temperature inside, and the process of electrolysis and evaporation. This means the fluid level of the battery needs to be checked on a regular basis. Conventional batteries also tend to discharge more rapidly than AGM type batteries.

HIGH TORQUE STARTERS

1.4 KW

This is a great stock replacement unit and is covered by the industry's best limited lifetime warranty. The 1.4kW design works well in larger CI engines with compression releases.

1.7 KW

A drop in solution for modified FL series engines. Due to the space constraints of FL series bikes our hi-output compact OSGR motor requires no modifications for installation. This starter utilizes a permanent-magnet motor design that is no larger than the stock 1.2kW starter. Due to the high in-rush currents of permanent magnet motors this is not a good solution for a "bar hop" bike due to the limited capacity of the charging system.
WE RECOMMEND USING 4GA BATTERY CABLES AND A 300 CCA AGM BATTERY WITH THIS STARTER.

CHARGING COMPONENTS

All of Rick's charging components are brand new parts and come with a one year replacement warranty. Most units are direct replacement pieces and come with the factory plug ends. This allows for an easy install – just unplug your part and plug ours in. We also know there is a need for universal rectifier regulators for certain unique machines. In this case, the rectifier regulator will come with wire leads only and you will need to hard wire it. Before replacing your rectifier regulator, be sure to read the instructions & check the integrity of all your electrical connectors.

STATORS & RECTIFIERS/REGULATORS CDI/ECU & POWERJET

Street bikes use a full DC electrical system almost exclusively. The charging system is made up of a stator, regulator/rectifier, and battery.

Motorcycles with batteries must convert the AC power from the stator into DC. In order to do this, the power coming from the stator must be converted by a regulator/rectifier. The rectifier actually converts the power from AC to DC, while the regulator keeps the power level (voltage) from going above the 13.8 -14.5 volts needed to power a standard 12 volt battery. It is important that the stator provides more power than needed by the motorcycle so that the battery will stay charged. If the motorcycle uses more power than the stator can provide, the battery will start to drain. This will typically happen if the voltage drops below 13 volts.

RECTIFIER/REGULATOR

ElectroSport regulator/rectifiers are designed to be direct replacements to original equipment by using stock mounting locations and OEM style connectors. These parts are designed to handle higher power loads than their OEM counterparts and are recommended when upgrading a stator to a high-powered alternative. Our regulator/rectifiers are a cost effective solution to a blown OEM part and are engineered to prevent these problems from arising again.

PLUG-IN STATOR

We strive to build stators that last and exceed our customers' expectations. We often include upgraded features on our performance stators. Changing winding specifications, wire size, and the number of poles that the magnet wire is wrapped around are only a few of the tricks up our sleeve for bringing the most advanced power generation to motorsports. Almost all of our stators provide a substantial power gain within the engine rpm ranges that it is needed most.

3-PHASE HEAVY DUTY STATOR

This heavy duty stator can be used as a higher output replacement for the OE stator. Output is about 20% more than the OE stator provides. This new stator is built with the highest grade lamination materials and the copper windings are triple insulated for maximum reliability. To ease installation we supply it with new connectors and wire sleeving. It is a very cost-effective replacement unit for when the OE stator failed, and it comes with a full one year warranty.

POWERJET FUEL CONTROLLER

The PowerJet is a simple yet complicated device. It measures the outside air temperature very close to where the stock sensor is located, and adjusts the signal from the OEM air temperature sensor to the ECU to make use of the built in Air Temperature Correction factor that is built into every stock ECU.

What this accomplishes is that the ECU is told that the intake air is a little cooler than it is, and the ECU will respond by injecting a fraction more fuel depending on the PowerJet setting. The rider will notice a substantially improved engine response when you twist the throttle. The neat thing is that when under constant load (constant speed) the oxygen sensor in the exhaust will make the ECU correct the fuel/air ratio back to stock! However, as soon as the system notices an increase in power it switches from closed loop (oxygen sensor feedback) back to open loop (no feedback) and will correct the fuel/air ratio by the amount you selected on the PowerJet. It can be easily installed by plugging it in between the stock AIT sensor which is usually located somewhere on the airbox and the bike's wiring harness. Each PowerJet comes with the exact plug in connectors and installation will normally only take a few minutes. Finding the air temperature sensor usually takes more time than plugging in the PowerJet.

PIAA BULBS

PIAA POWERSPORTS

GREATER PERFORMANCE: PIAA bulbs are engineered with XTRA Technology for greater performance per watt than any other bulb on the road. (XTRA is a term coined by PIAA to designate a high-efficiency bulb that is designed to produce greater light output than its rated power consumption, i.e. 55W = 85W of light output.) Greatly enhance your ability to see and be seen. A metal bond holds the heat-resistant glass tube securely to prevent cracks and leaks. A welded focus ring and one-piece filament support assures proper positioning.

BRILLIANT COLOR: Beam color affects visibility and eye strain over long periods. The brilliant white/blue light allows comfortable night driving over extended periods of time. PIAA bulbs are both a performance upgrade and an aesthetic enhancement. You will see the difference even in the daytime.

WARRANTY AND SUPPORT: PIAA is so confident in the durability and reliability of our products that we offer a no questions asked, replacement of any halogen bulb that fails within one year of purchase.

PIAA H4 EXTREME WHITE PLUS BULB

PIAA STANDARD HALOGEN BULB

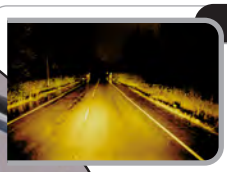
Super Plasma GT-X

The Super Plasma GT-X bulbs offer an unmatched combination of fashion and performance with a bluish-purple color very similar to H.I.D. and the closest yet to sunlight.

Xtreme White / Xtreme White Plus

The Xtreme White Series of bulbs have a cool white light output that gives the driver better color recognition on depth perception and better contrast. The blue top coat adds a slight blue tint to a lamp with no loss of performance.

Intense White



The Intense White bulbs produce a radiant white beam and provide the best possible balance between performance and bulb life.

Star White

Star White bulbs are significantly whiter and brighter than stock halogen and will increase bulb performance without taxing your vehicle's electrical system.

Ion Crystal / Plasma Ion Yellow

Ion Crystal coating transforms white light into amber light without diminishing the strength of the beam. Ion Crystal technology allows as much as 95% of the light produced by the bulb to pass through, compared to as little as 65% through dyed glass. The long wavelength Plasma Ion beam reduces refraction for dramatically increased visibility in snow, rain and fog.

HALOGEN HEADLAMP BULBS

ARCTIC CAT | POLARIS | SKI DOO | YAMAHA - SEE APPLICATION GUIDE ON OPPOSITE PAGE

ALL WEATHER
(AW) These bulbs are designed for rain, fog and snow and are just as bright as standard halogens. The all weather dichroic coating keeps the glare down from the elements.

ALL WEATHER BLUE
(AWB) Same advantages as the all weather, plus the blue coating is more noticeable to oncoming traffic. Note: The coating does decrease the light output slightly.

GOLD
(G) The biggest advantage is its ability to be seen by oncoming traffic.

XENON BOOSTED
(XPB) Best performing lamp on clear nights, the xenon gas increases the light output to compensate for the special vycor blue coating. These combinations bring the light as close to daylight as possible.

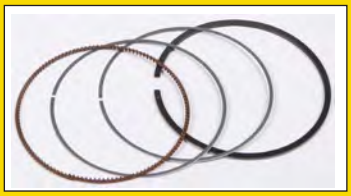
PISTON KITS

Piston Kits come complete with Piston, Rings, Clip, Pin and now include high-quality Top End Bearing.

PISTON KITS

ProX pistons are precision machined on the latest, state of the art CNC equipment. The same low-expansion, low-friction piston alloy is used as is used for all major Japanese engine manufacturers. ProX Piston Kits are a first class solution to replace the original piston in your Motorcycle, Scooter, Moped, ATV, Personal Watercraft, etc.

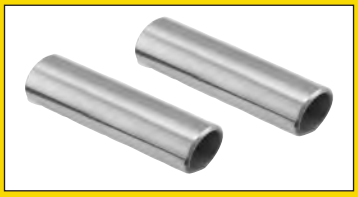
COATED FOR ULTIMATE PERFORMANCE



Most of the ProX pistons come with a coating. Our OEM style Tin coated pistons assist the wear in process when you just started the bike. We have developed a new skirt coating that not only assists the wear in process, but also helps reducing friction after the wear in. The black coating is made from a delicate mix of materials and will increase performance.

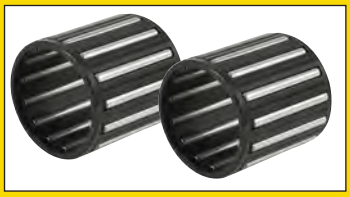
PROX PISTONS FOR NICASIL/PLATED CYLINDERS

The latest cylinders are plated by a Nicasil plating. Therefore we offer a wide range of ProX pistons in standard size, as well as in A, B, C, D+ oversizes.



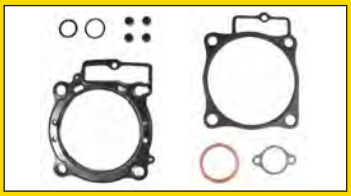
PROX PISTONS FOR SLEEVED CYLINDERS

ProX Piston Kits for sleeved cylinders are available in standard size and a wide range of oversizes. The availability of oversizes up to 2mm significantly helps to increase the lifespan of a cylinder by offering more re-boring possibilities. Take advantage of the additional oversizes to extend the lifespan of plated cylinders. All ProX Piston Kits are supplied complete with Piston Rings, Wrist Pin and Circlips, ready to install!



PISTON RINGS

ProX piston rings are made by OEM factories to exact specifications. ProX uses well known brands like Rikken Japan, TP and NPR to be sure you will get the quality you might expect from our brand. All ProX piston rings can be used in cast iron bores, nickel ceramic platings (Nikasil), boron composite and electrofusion bores. If the application has a OEM cylinder with chrome bores, ProX supplies a different piston ring as in the ProX piston kit.



PISTON PINS

ProX Racing Parts offer a wide range of piston pins in many sizes and specifications. We offer straight wall and tapered wall pistons pins. Our chromed pistons pins are specially designed for the application. Every ProX piston pin is machined precisely and treated to get the best hardness and properties to stand the extreme conditions where it is used for.

PISTON PIN BEARING

These high-quality wrist pin bearings for a wide variety of applications. ProX wrist pin bearings are manufactured to the highest quality standards and are case-hardened for maximum life and smooth operation at high rpm. **High-quality Top End Bearings are now included in the Piston Kits.**
